

GONDOLA COVER

The Ecofab Gondola Cover is our most common and economical solution for product containment in open-top railcars and has been continually improved for over 45 years. This cover allows for full access to the railcar's contents once removed, and our reliable yet straightforward locking system can be applied without modifying the railcar in most cases.

These fiberglass covers can be built to suit any size railcar and any load profile. Each cover is fitted with four automatic locks that enable a single operator on a forklift or crane to remove and replace the cover within minutes.

We use fiberglass to build our covers as it is lightweight, has proven to be stronger than steel on a pound-for-pound basis and can readily accommodate the vibration and twisting of a railcar. The covers are chemical resistant, waterproof, UV resistant and do not suffer corrosion.

These covers can be easily stacked for transport or storage and, once fully equipped with locking hardware, weigh approximately 1850 lbs for a standard 52' 6" gondola railcar.

The U.S. Department of Transportation has determined that a railcar equipped with an Ecofab cover meets the criteria for a closed transport vehicle to carry low-level radioactive waste as specified in Title 49 CFR 173.403.

Ecofab can provide railcar covers via a range of financial packages and all of our covers come with a full service and maintenance package. Please contact us for further details on the benefits we can bring to your business.
